DETAILED ACTION

Drawings

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the port element, the needle tip as well as other claimed elements are not clearly shown. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 17-22, 2-4 and 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Avaltroni (US 5989197 A).

Avaltroni discloses a medical device comprising a catheter (4) having a catheter lumen with a proximal end and a distal end; a needle (3) with a solid pointed end, an internal passage and a port (6) in fluid communication with the internal passage and selectively moving to extend from a distal end of the catheter (4) to a first position wherein the pointed end and port (6) are inserted into the body material and retract to a second position wherein at least the port is positioned within the catheter lumen (see fig.

Art Unit: 3763

6); a sheath (5) having a sheath lumen through which the catheter (4) is selectively moved; and a driver (12), and including means for selectively restricting relative movement between the sheath and the catheter (7).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 5-8 and 13-16 rejected under 35 U.S.C. 103(a) as being unpatentable over Avaltroni in view of Bordorff et al (US 20020026126 A1).

Avaltroni discloses the device as described above in reference to claims 17-22, 2-4 and 10-12, but fails to disclose that the driver selectively rotates the needle, a positioning sensor on the needle and a second port in fluid communication with the internal passage and the first port.

Burdorff et al discloses a similar device, including a driver that selectively rotates the needle (see fig. 17B), a positioning sensor (198) on the needle (70) and a second (22) port in fluid communication with the internal passage and the first port.

It would have been obvious to one having ordinary skill in the art at the time of invention by applicant to modify the device of Avaltroni by incorporating the rotator, sensor and second port of the type taught by Burdorff et al, in order to more precisely control and collect the tissue material.

Response to Arguments

Applicant's arguments with respect to claims 2-8, and 10-22 have been considered but are moot in view of the new ground(s) of rejection.
